Assignment 4

2018-03-05

#### Assignment 4

1. Implement a greedy algorithm to approximately solve the TSP.
2. Dijkstra's algorithm is an example of a greedy algorithm. Give pseudocode for a modified version of Dijkstra's algorithm that returns `true` if the graph contains a cycle.

```
parent = empty map  $v \rightarrow v$ 
distance = empty map  $v \rightarrow \text{int}$ 
visited = empty set
cycleExists = false

while (not all vertices have been visited):
    current = cheapest unvisited vertex from distance table
    visited.add(current) & check if target
    for all other children in adjacent nodes of current:
        if child is in visited:
            cycleExists = true
        else:
            edgeCost = edge weight between current and other
            cost = distance(current)
            if (edgeCost + cost < distance(other)):
                update distance for other
                parent.push(other, current)

return cycleExists
```

3. Optimal File Storage

**Minimum expected access time can be guaranteed by arranging the files from smallest to largest based on their value derived from (size of file / probability file will need to be accessed). For example, if a file has a size of 2 and the probability it will need to be accessed is 1 and another file has a size of 3 and the probability it will need to be accessed is 3, the second file will appear first on the tape.**

4. Weiss Exercise 10.3: A file contains only colons, spaces, newlines, commas, and digits in the following frequency: colon (100), space (605), newline (100), comma (705), 0 (431), 1 (242), 2 (176), 3 (59), 4 (185), 5 (250), 6 (174), 7 (199), 8 (205), 9 (217). Construct the Huffman Code.

| <u>Character</u> | <u>Huffman Code</u> |
|------------------|---------------------|
| :                | 001001              |

|                |               |
|----------------|---------------|
| <b>space</b>   | <b>000</b>    |
| <b>newline</b> | <b>00101</b>  |
| <b>,</b>       | <b>11</b>     |
| <b>0</b>       | <b>101</b>    |
| <b>1</b>       | <b>1000</b>   |
| <b>2</b>       | <b>00111</b>  |
| <b>3</b>       | <b>001000</b> |
| <b>4</b>       | <b>0100</b>   |
| <b>5</b>       | <b>1001</b>   |
| <b>6</b>       | <b>00110</b>  |
| <b>7</b>       | <b>0101</b>   |
| <b>8</b>       | <b>0110</b>   |
| <b>9</b>       | <b>0111</b>   |
